Circulation Research provides a medium for bringing together basic research on the cardiovascular system from various disciplines. The main research areas include biology, biochemistry, biophysics, morphology, pathology, physiology, and pharmacology. The Journal will also accept for publication manuscripts on clinical research that contribute to an understanding of fundamental problems.

Papers dealing solely with descriptions of apparatus and technique or with theoretical expositions will be accepted as space permits. Fragmentation of material from a general research project into numerous papers is discouraged. The initiation of a series of "studies" under a general heading is contrary to editorial policy.
